DTGiNET Recovery: Backup and Disaster Recovery

iNET Recovery

Are your backups really protecting your network AND your business?

DTGi can solve ALL of your backup and recovery needs with our **iNET Recovery** solution

An affordable end-to-end backup and disaster recovery program that is practical and effective for your business.

- Local AND Offsite backup storage
- Recover from a failed server quickly to keep your business going while the failed server is being fixed
- Site disaster plans implemented to get you recovered from a disaster quicker.
- Shorten backup windows – fast backup and recovery
- Much better ROI than tape solutions

Make your backups work for you.....ask yourself:

- How long do your backups take?*
- Is it causing performance problems on your servers?*
- How much time does it take to keep backups going?*
- How long will it take to restore if your servers fail?*
- Can you afford to be down until the server is fixed?*
- What if something happens to your tapes.....do you have a second set offsite somewhere else?*

More for your money....

This is not a "Backup" solution....this is a "Recovery" solution. Typical backups do not deliver. We backup your data, keep historical backups, get your data safely and securely offsite and manage the entire service for you!

Even more.... solve real business problems with real solutions

Typical backups protect the EXISTENCE of your data. But the reality is the restoration process is not practical. It can take a very long time to restore costing you time and money.

We can not only backup your data properly, but we will protect your business as well. We can get a virtual copy of your failed server up in a short period time. You can continue to operate while we fix the server that failed.

Unlock the power of what a recovery solution can do for your business... through local and offsite backups, historical backups, server failover and disaster recovery plans in place you can rest assured that you are protected and can survive an outage or disaster

A full recovery solution.....protect the data, protect the servers and protect the BUSINESS
